

# Introduction to administrative register data

Christian Dudel

May 17, 2023

# Materials

Materials are available from GitHub, also mirrored on OSF:

- ▶ <https://github.com/christiandudel/ThinkData2023>
- ▶ <https://osf.io/h6knq/>

# What will be covered in this course?

1. Broad overview of benefits and challenges of ARD
2. Handling of ARD using R

# What will NOT be covered in this course?

- ▶ Every possible pro and con of ARD
- ▶ Every possible computational challenge
- ▶ Stata, Python, SPSS, SAS, ...
- ▶ Analysis

# Goals

At the end of this course...

- ▶ ...you have a basic idea when ARD is appropriate
- ▶ ...you have a basic idea how to handle ARD

Target audience: No experience with ARD

# Prerequisites

- ▶ No experience of ARD required
- ▶ Basic statistical knowledge
- ▶ Some experience using statistical software (R or other software)

# Course schedule

9:30-12:00 Introduction

13:00-14:30 Handling of big data, classic ARD

15:00-16:30 Complex ARD

# Contact

- ▶ Email: [dudel@demogr.mpg.de](mailto:dudel@demogr.mpg.de)
- ▶ Office: 358 (3rd floor, east wing)
- ▶ Twitter: [@c\\_dudel](https://twitter.com/c_dudel)
- ▶ Mastodon [@c\\_dudel@mstdn.social](https://mstdn.social/@c_dudel)
- ▶ Website: <http://www.christiandudel.com>

## My experience with ARD

- ▶ Birth register data from many countries
- ▶ Social security register data from Spain, Italy, US
- ▶ Health register data from Scotland
- ▶ Matched survey and social security register data from Germany
- ▶ Combined data from several registers for Norway

# What is ARD? (1)

- ▶ No consistent definition in literature
- ▶ No consistent terminology: administrative register data, register data, administrative data, administrative register, administrative records, . . .

## What is ARD? (2)

- ▶ “Administrative” = Derived from administrative system
- ▶ “Register” = Run continuously, full target population
- ▶ “Data” = Quantitative, rectangular data

# Examples of ARD

- ▶ Population registers
- ▶ Birth registers, death registers
- ▶ Migration registers
- ▶ Tax registers
- ▶ Social security registers
- ▶ Student registers
- ▶ Health registers
- ▶ Company/establishment registers
- ▶ Housing/building registers
- ▶ Vehicle licensing registers

# Benefits of ARD

- ▶ Size: not just a sample, often large
- ▶ Participation: often compulsory (legally required), sometimes highly incentivized
- ▶ Nonresponse: Often no (or very few) missing values

# ARD in demographic research

- ▶ ARD has a very long history in demography
- ▶ “Classic” demography often used ARD...
- ▶ ... but mostly restricted to vital registration data

# ARD in social science research (1)

- ▶ ARD is a (mostly) recent development in (social science) research
- ▶ According to Google Scholar: 1,200 publications in 1990-94 with 'register data'...
- ▶ ... while in 2015-2019 there were 16,900 publications

## ARD in social science research (2)

Why did ARD only become popular recently?

- ▶ Availability (digitization)
- ▶ Supply and demand
- ▶ Computational power

# What makes ARD special?

- ▶ Found data: Not collected for research purposes
- ▶ Found data: Often messy, fragmented, semi-systematic
- ▶ Big data: Often large and complex

# Challenges of ARD

- ▶ Ethical
- ▶ Legal
- ▶ Technical
- ▶ Practical
- ▶ Quality

# Challenges: Ethical

- ▶ Informed consent
- ▶ Misuse of registers

## Challenges: Legal

- ▶ Data protection laws
- ▶ Limited access and control

## Challenges: Technical

- ▶ Size: Requires a lot of computing power
- ▶ Complexity: Handling difficult because of fragmentation

## Challenges: Practical

- ▶ Documentation: Completeness
- ▶ Language: Data, documentation, experts

## Challenges: Quality

- ▶ Total survey error framework: difference between true value of statistic and value derived from survey is due to two main sources of errors, measurement and representation
- ▶ Sources of errors can be further decomposed into error components
- ▶ Can also be applied to ARD

# Total survey error framework: Components

- ▶ Representation: Coverage error, sampling error, nonresponse error (unit/item), adjustment error
- ▶ Measurement: Validity, measurement error, processing error
- ▶ To what extent do these apply to ARD?

## Readings: General
